DR. ELIZABETH SHIRTCLIFF

Riding the Physiological Roller-Coaster: How Life Stress Alters Stress Responsive Physiological Systems

Dr. Shirtcliff is an Associate Professor and Director of Applied Biopsychology Area at the University of New Orleans. She is a behavioral endocrinologist who seeks to understand the developmental factors leading to increased risk for psychopathology during adolescence. She maintains the Stress Physiology In Teens (SPIT) laboratory which utilizes a variety of noninvasive tools to investigate psychobiological development.
